

Clamp-on Current Probes

- Up to 100 MHz bandwidth and 500 Arms current measurement range
- Hybrid technology to measure ac and dc
- Compatible with 1 M Ω scope input

Accurate current measurements without breaking the circuit

Compatible with any scope or voltage measuring instruments with BNC input, the 1146B and N2780B Series current probes offer accurate and reliable solutions for measuring dc and ac currents. The probes use a hybrid technology that includes a Hall effect sensor, which senses the dc current and a current transformer, which senses the ac current, making it unnecessary to make an electrical connection to the circuit.

1146B 100 kHz current probe

The 1146B ac/dc current probe provides accurate display and measurement of currents from 100 mA to 100 Arms, dc to 100 kHz, without breaking into the circuit. A battery level indicator and overload indicator help ensure proper readings. It connects directly to the scope through a 2-m coaxial cable with an insulated BNC.

1147B/N2893A 50-MHz/100-MHz current probe with AutoProbe interface

The 1147B/N2893A is a wide bandwidth, dc to 50-MHz/100-MHz current probe. The probe offers flat frequency response across the entire dc to 50-MHz/100-MHz bandwidth, low noise (< -2.5 mArms) and low circuit insertion loss.

The 1147B/N2893A probe is compatible with the AutoProbe interface, which completely configures the oscilloscope for the probe when used with the 3000 InfiniiVision Series scopes with AutoProbe interface. Probe power is provided by the scope, so there is no need for an external power supply. The N2893A uniquely provides auto demagnetization and offset elimination feature when used in conjunction with InfiniiVision or Infiniium scopes.

N2780B/81B/82B/83B/83L 2-MHz/10-MHz/50-MHz/100-MHz current probe

The N2780B Series current probes are high bandwidth, active current probes, featuring flat bandwidth, low noise (2.5 mArms) and low circuit insertion loss. In conjunction with the power supply (model N2779A), this probe can be used with any oscilloscope having a high-impedance BNC input. The companion power supply N2779A (3 x 12 Vdc output) lets you connect up to any three N2780B-83B current probes to a single power supply.

The N2783L 80 MHz current probe offers 5 m long cable, which allows you to reach DUTs in long distances very easily. Other than the bandwidth performance, the N2783A and N2783L have the same electrical performance other than bandwidth. The N2783L also requires the N2779A power supply to power the probe.
